

The subclass Rosidae

The subclass Rosidae includes
39 orders
about 170 families,
2 800 genus
and more 55 000 species

Order Rosales

The Rosaceae family

The Rosaceae family includes about 100 genera and 3,000 species

Padus avium

Fragaria vesca

A characteristic feature of the family is the presence of the hypanthium. Hypanthium is a structure resulting from fusion of bases of sepals, petals and stamens with tissues of receptacle. The shape of the hypanthium can be different: saucer-shaped, bell-shaped, pitcher-shaped. In some plants, the hypanthium is involved in the formation of the fruit (rosehip).

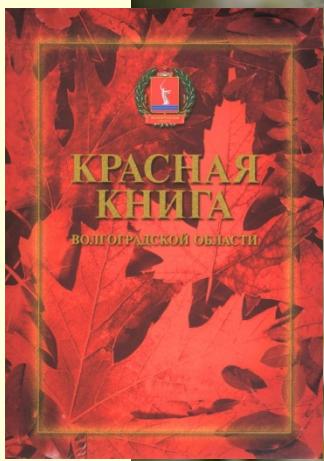

**There are 4 subfamilies in the family
Rosaceae: Spiraeideae, Rosoideae,
Prunoideae, and Malaideae.**

Comparative signs of subfamilies family Rosaceae

Signs	Spiraeideae	Rosoideae	Malaideae	Prunoideae
Number of carpels	∞ - 5(1)	∞, rarely – 5	5 - 8	1
Gynoecium Ovary	apocarpic superior	apocarpic superior	syncarpic inferior	monocarpic superior
Fruits	etaerio follicles	etaerio follicles, etaerio of achenes etaerio of drupelets, Utricle, cynarrhodium	pome	drupe
Form of receptacle	flat	flat, convex, concave	concave	cupped
Subcalyx	missing	available	missing	missing
Formula of flower	*Ca ₍₅₎ Co ₅ A _∞ G ₆₋₁₀ <i>Filipendula ulmaria</i>	*Ca ₍₅₎ Co ₅ A _∞ G _∞ <i>Rosa canina</i>	*Ca ₍₅₎ Co ₅ A _∞ G ₍₅₎ <i>Malus domestica</i>	*Ca ₍₅₎ Co ₅ A _∞ G ₁ <i>Prunus spinosa</i>
Leaves	simple	compaund, less often simple	Simple or compaumd	simple
Stipules	Without stipules	With stipules	With early falling stipules	With early falling stipules
Life form	shrubs	herbs, less often – shrubs	trees, shrubs	trees, shrubs
Genus	<i>Filipendula,</i> <i>Spiraea</i>	<i>Rosa,</i> <i>Rubus,</i> <i>Fragaria,</i> <i>Potentilla,</i>	<i>Malus, Pyrus, Sorbus,</i> <i>Crataegus</i>	<i>Cerasus, Prunus,</i> <i>Armeniaca, Persica,</i> <i>Amigdalus, Padus,</i>

The subfamily - *Spiraeideae*,

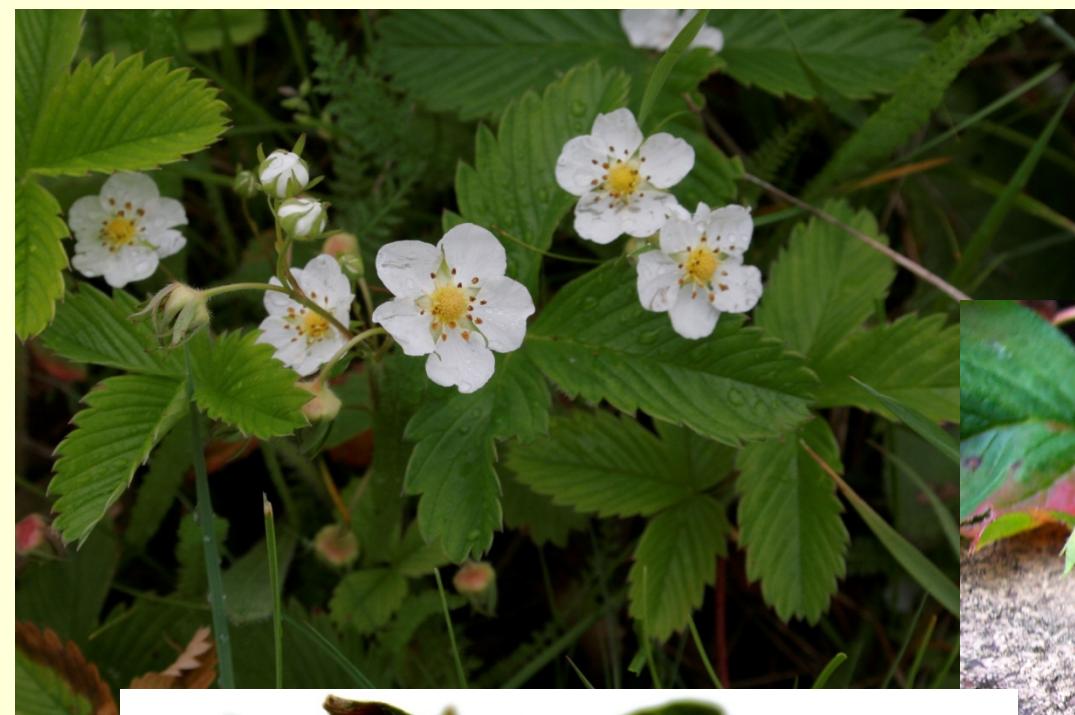

Spiraea litwinowii *Ca₍₅₎Co₅A_∞G₆₋₁₀

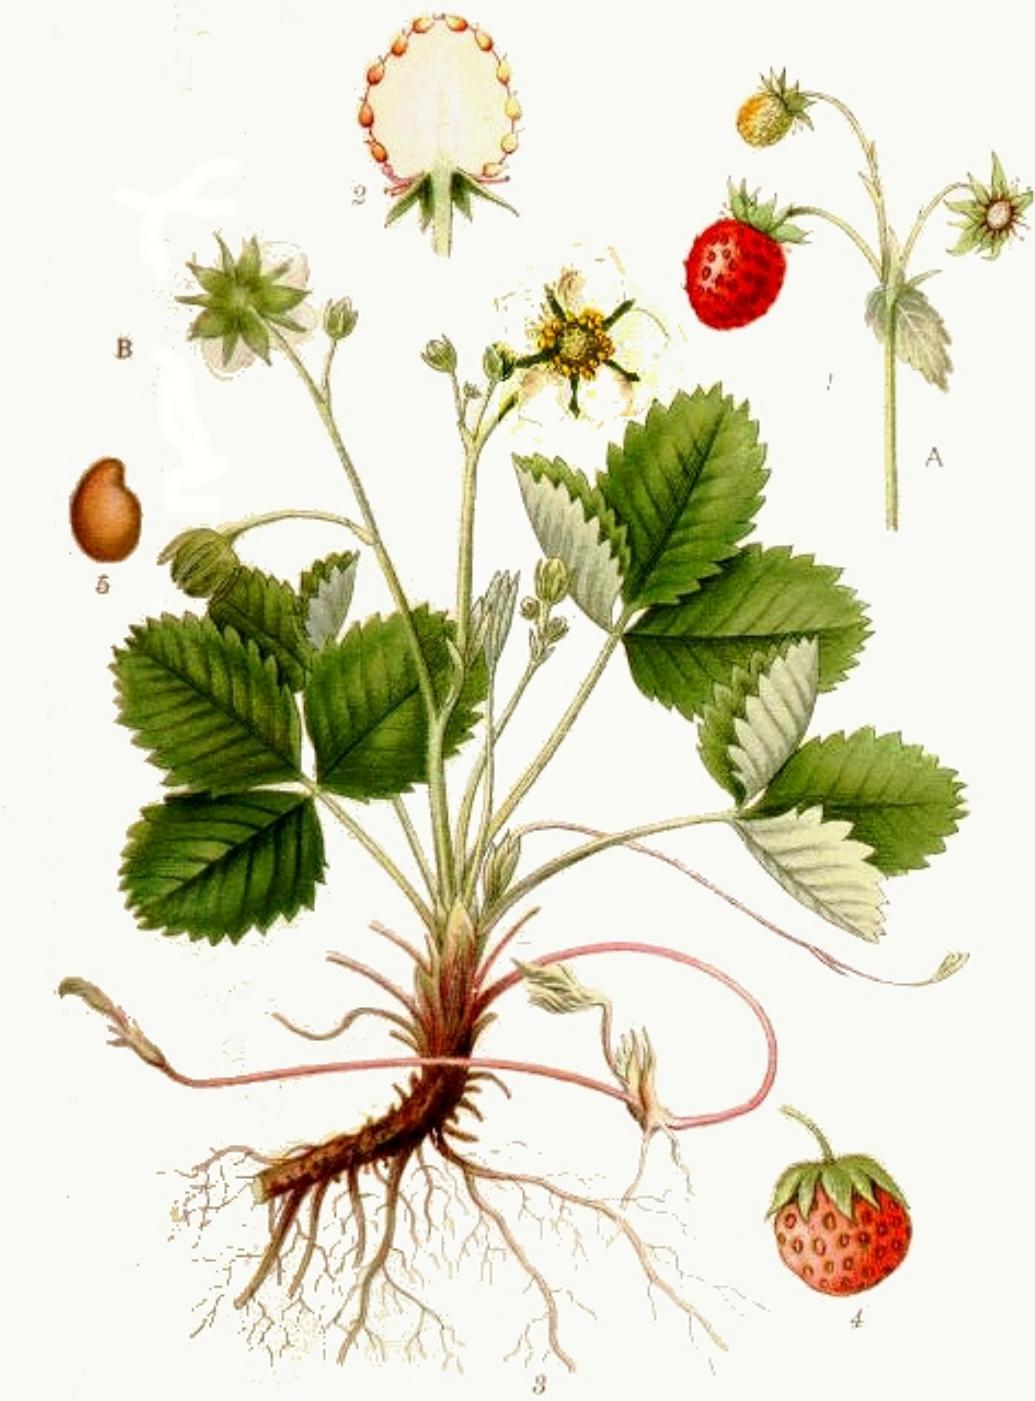

The subfamily - *Rosoideae*,

Rosa cinnamomea *Ca₍₅₎Co₅A_∞G_∞

Fragaria vesca
(strawberry)

Potentilla arenaria

Rubus idaeus (raspberries)

Rubus caesius (dewberry)

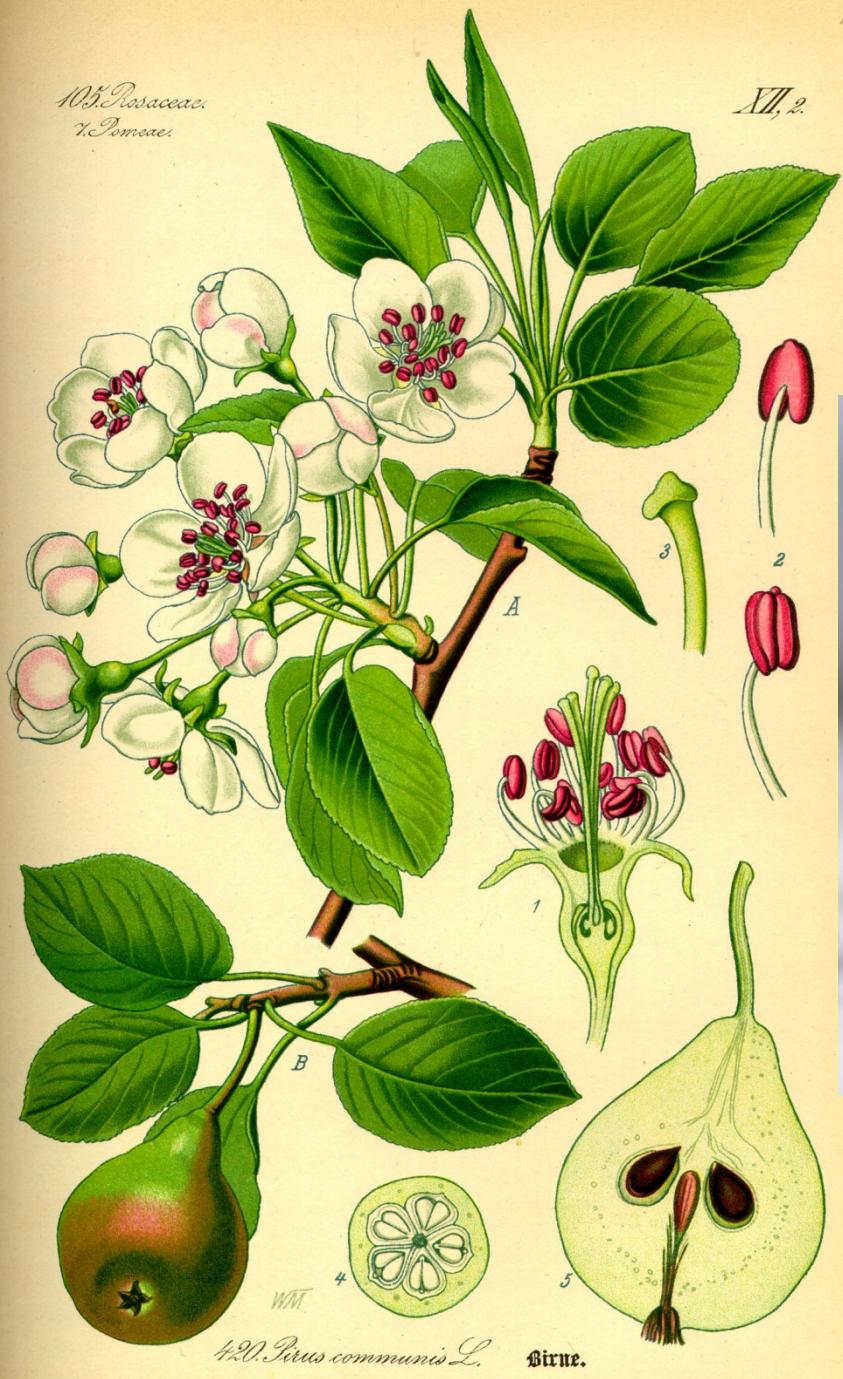

The subfamily - *Malaideae*

Malus domestica

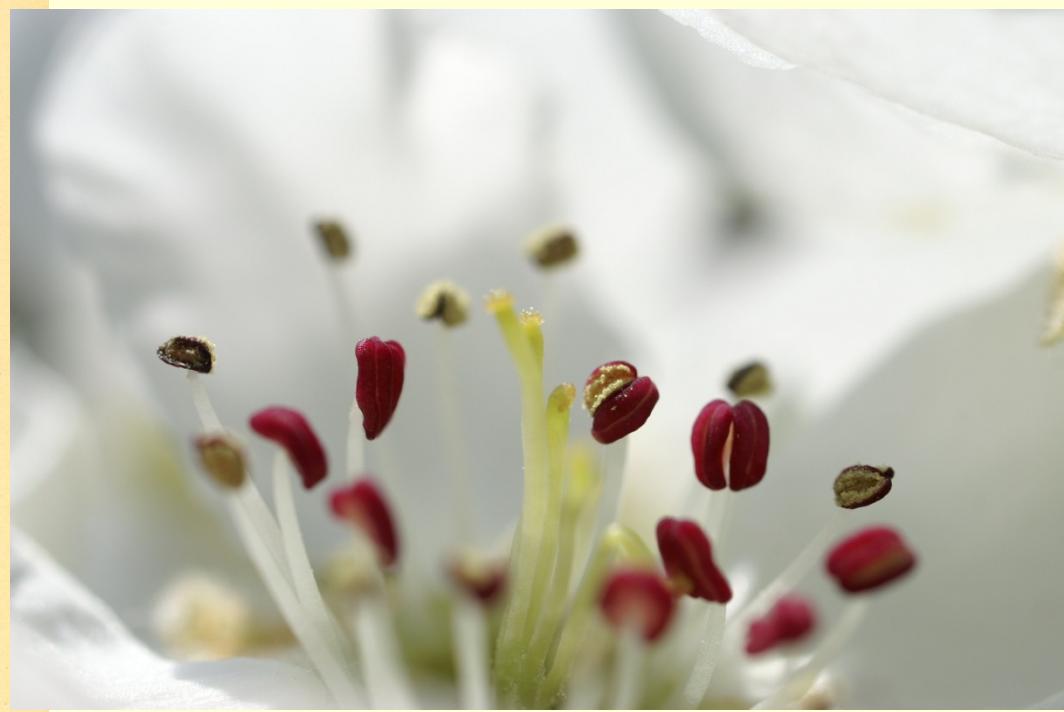

W. Rosaceae.
2. Pomeae.

III, 2.

Pyrus communis

Pyrus communis (pear)

Cydonia oblonga (quince)
