

Lesson 2: Division of the Bryophytes

Life cycle of higher plants

Divisio Mosses – *Bryophyta*

Marchantiopsida

Bryopsida

Anthocerotopsida

The main feature of mosses is the predominance of the haploid stage, the gametophyte, in the development cycle

Class Marchantiopsida or Hepaticopsida)

The thallus

Gemma cups

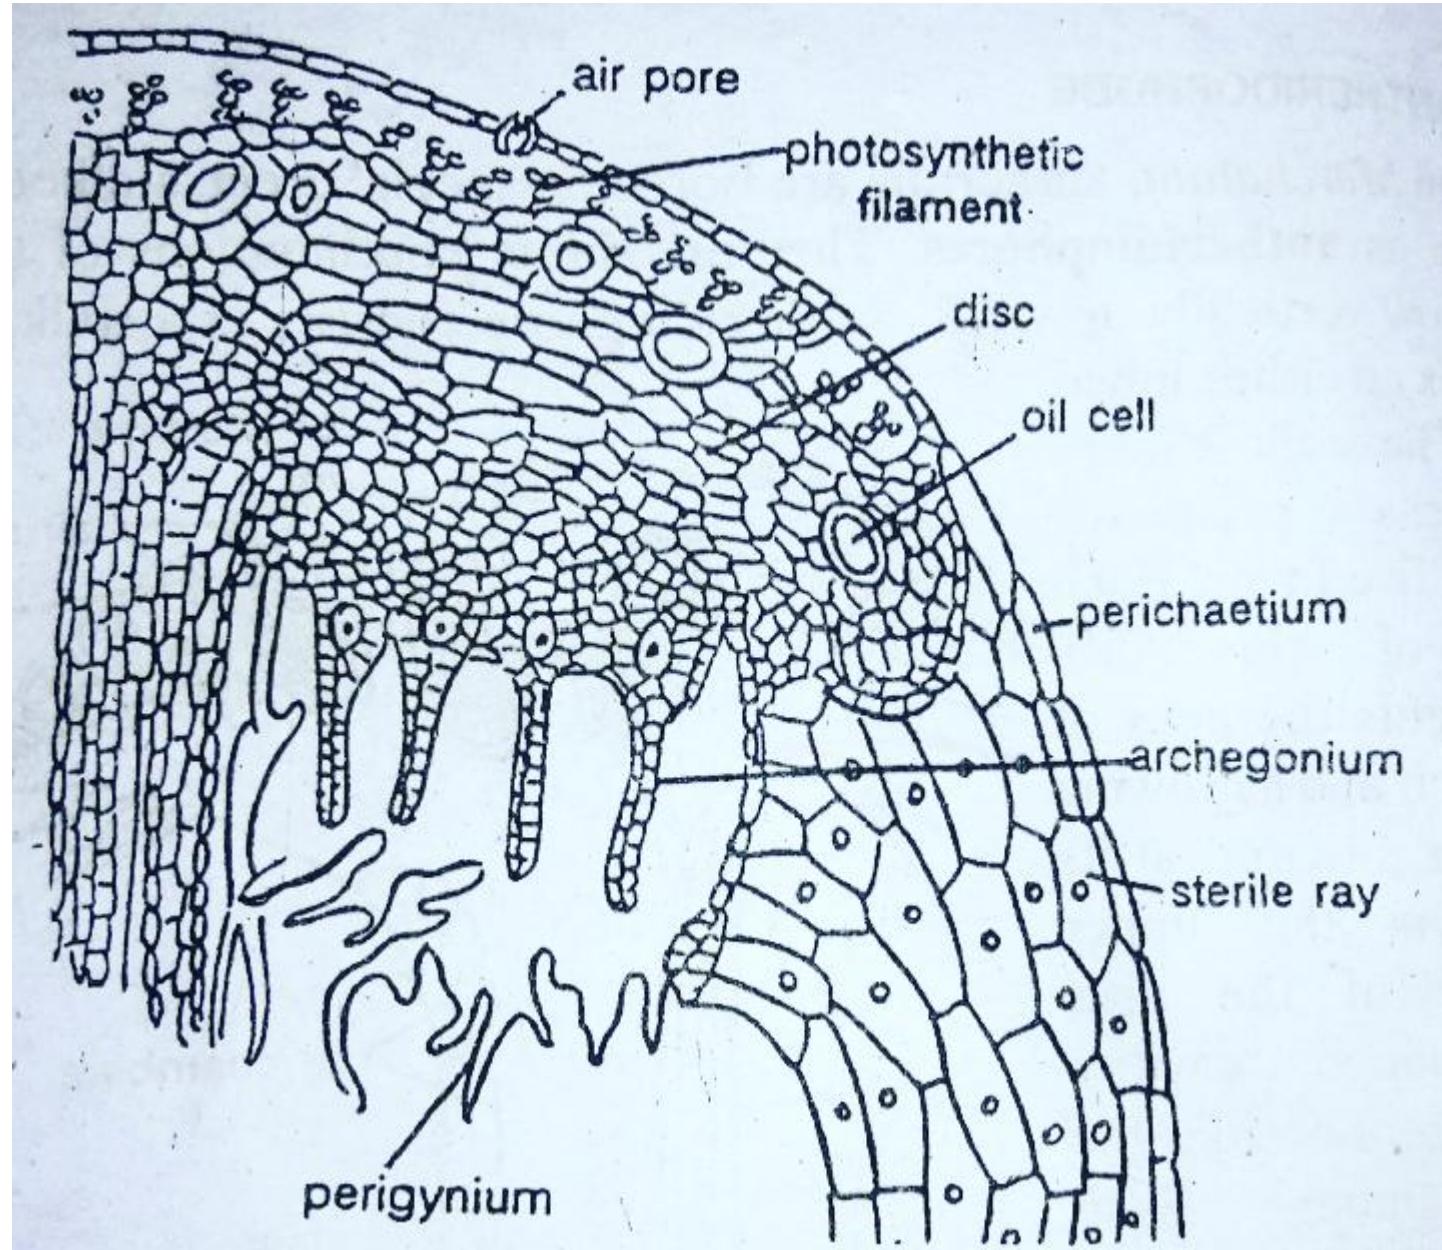

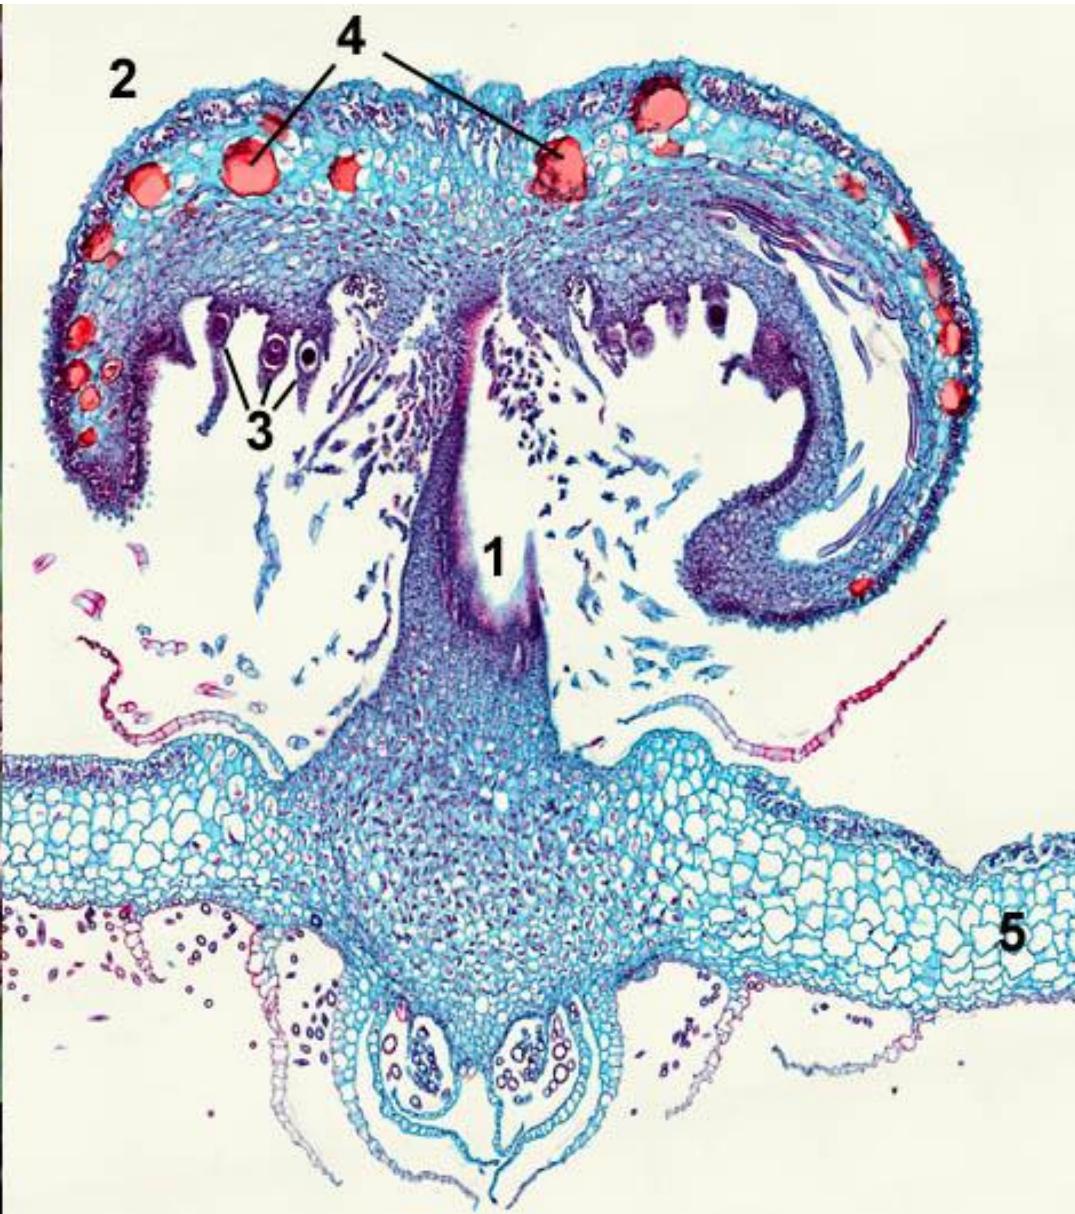

Male gametangiophores

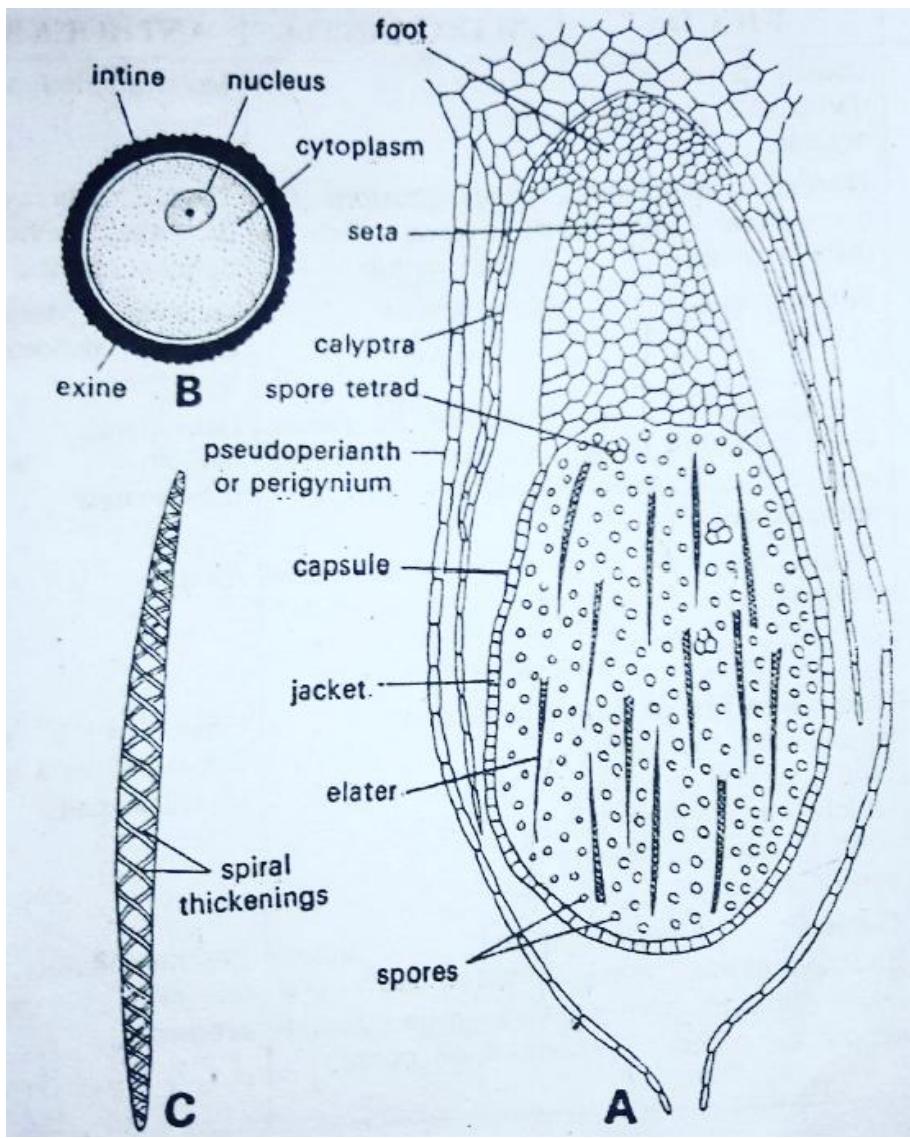

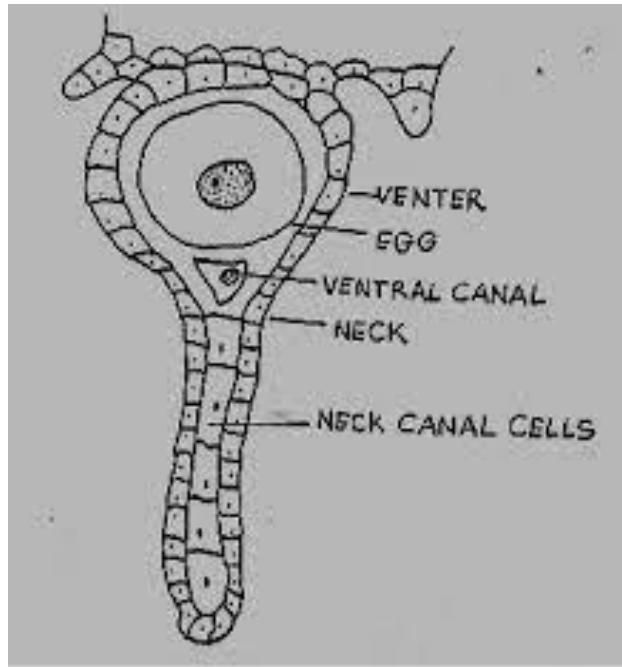

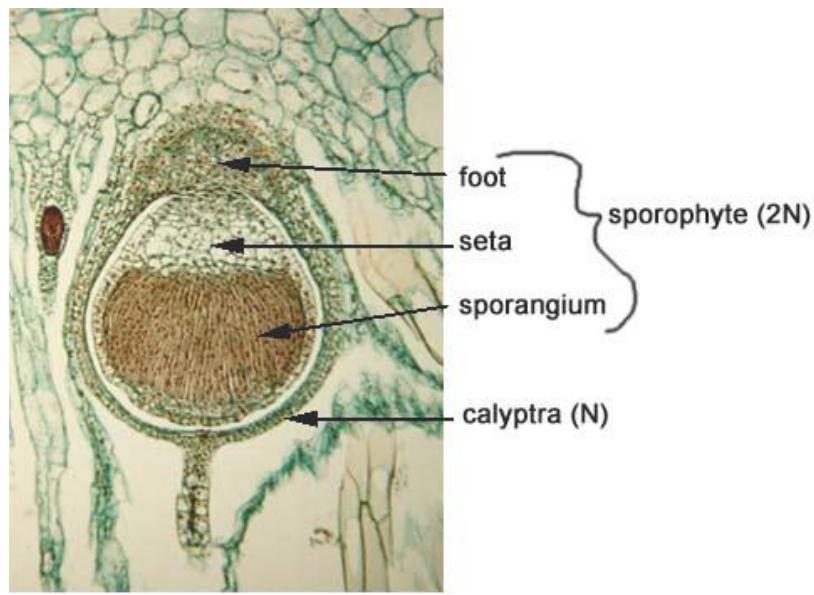

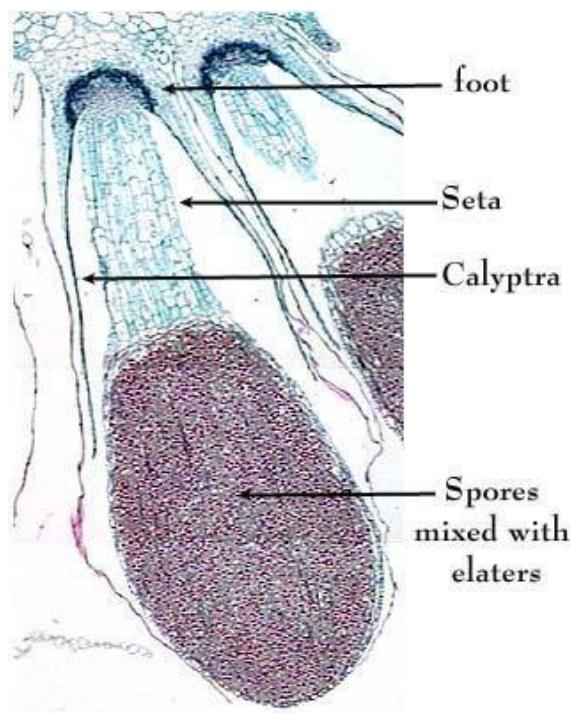

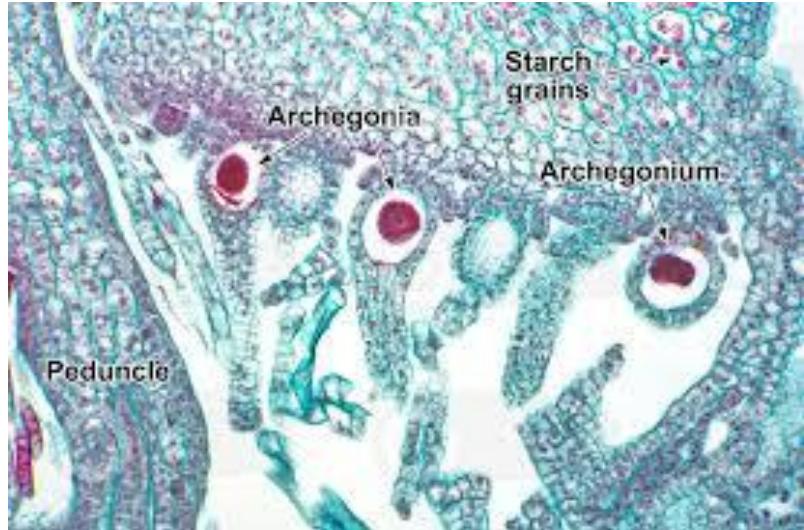

Female gametangiophores

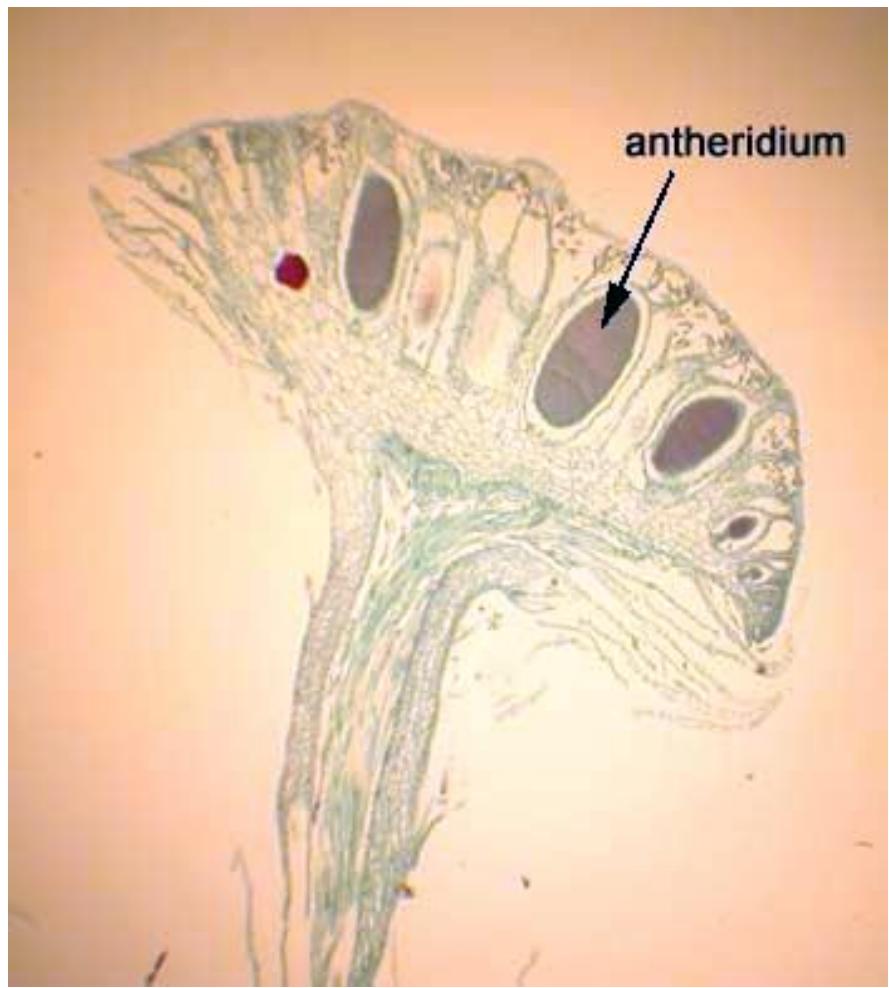

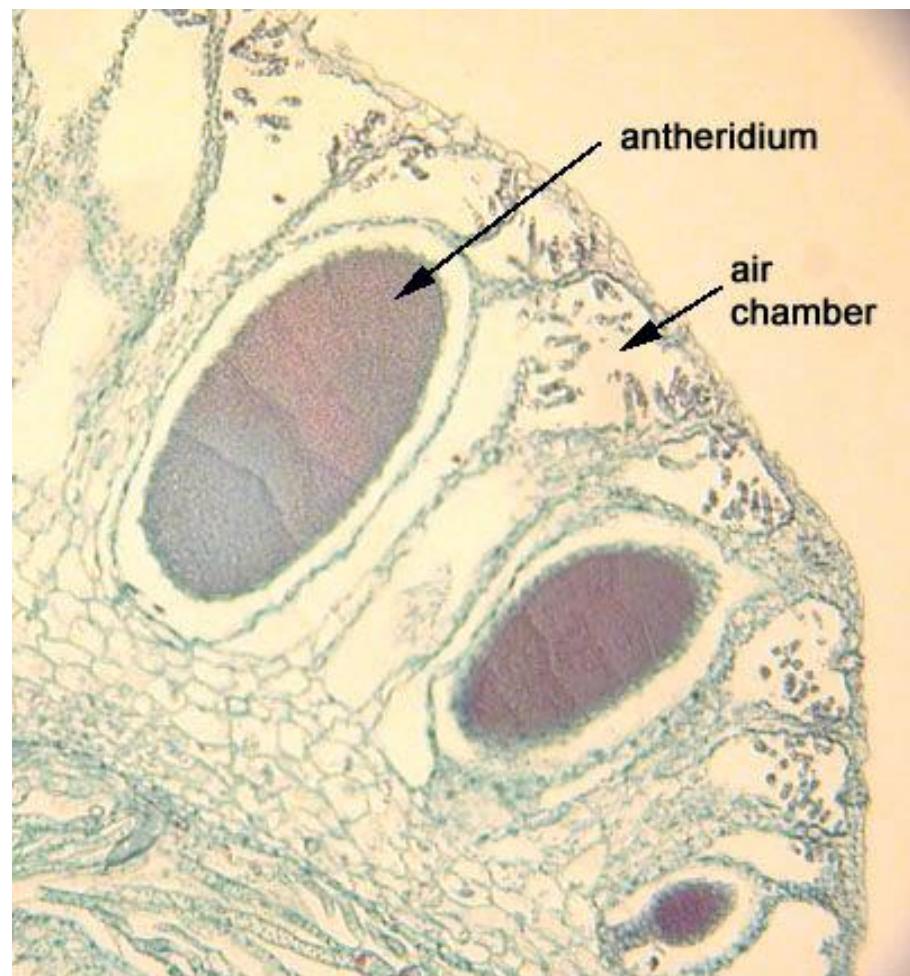

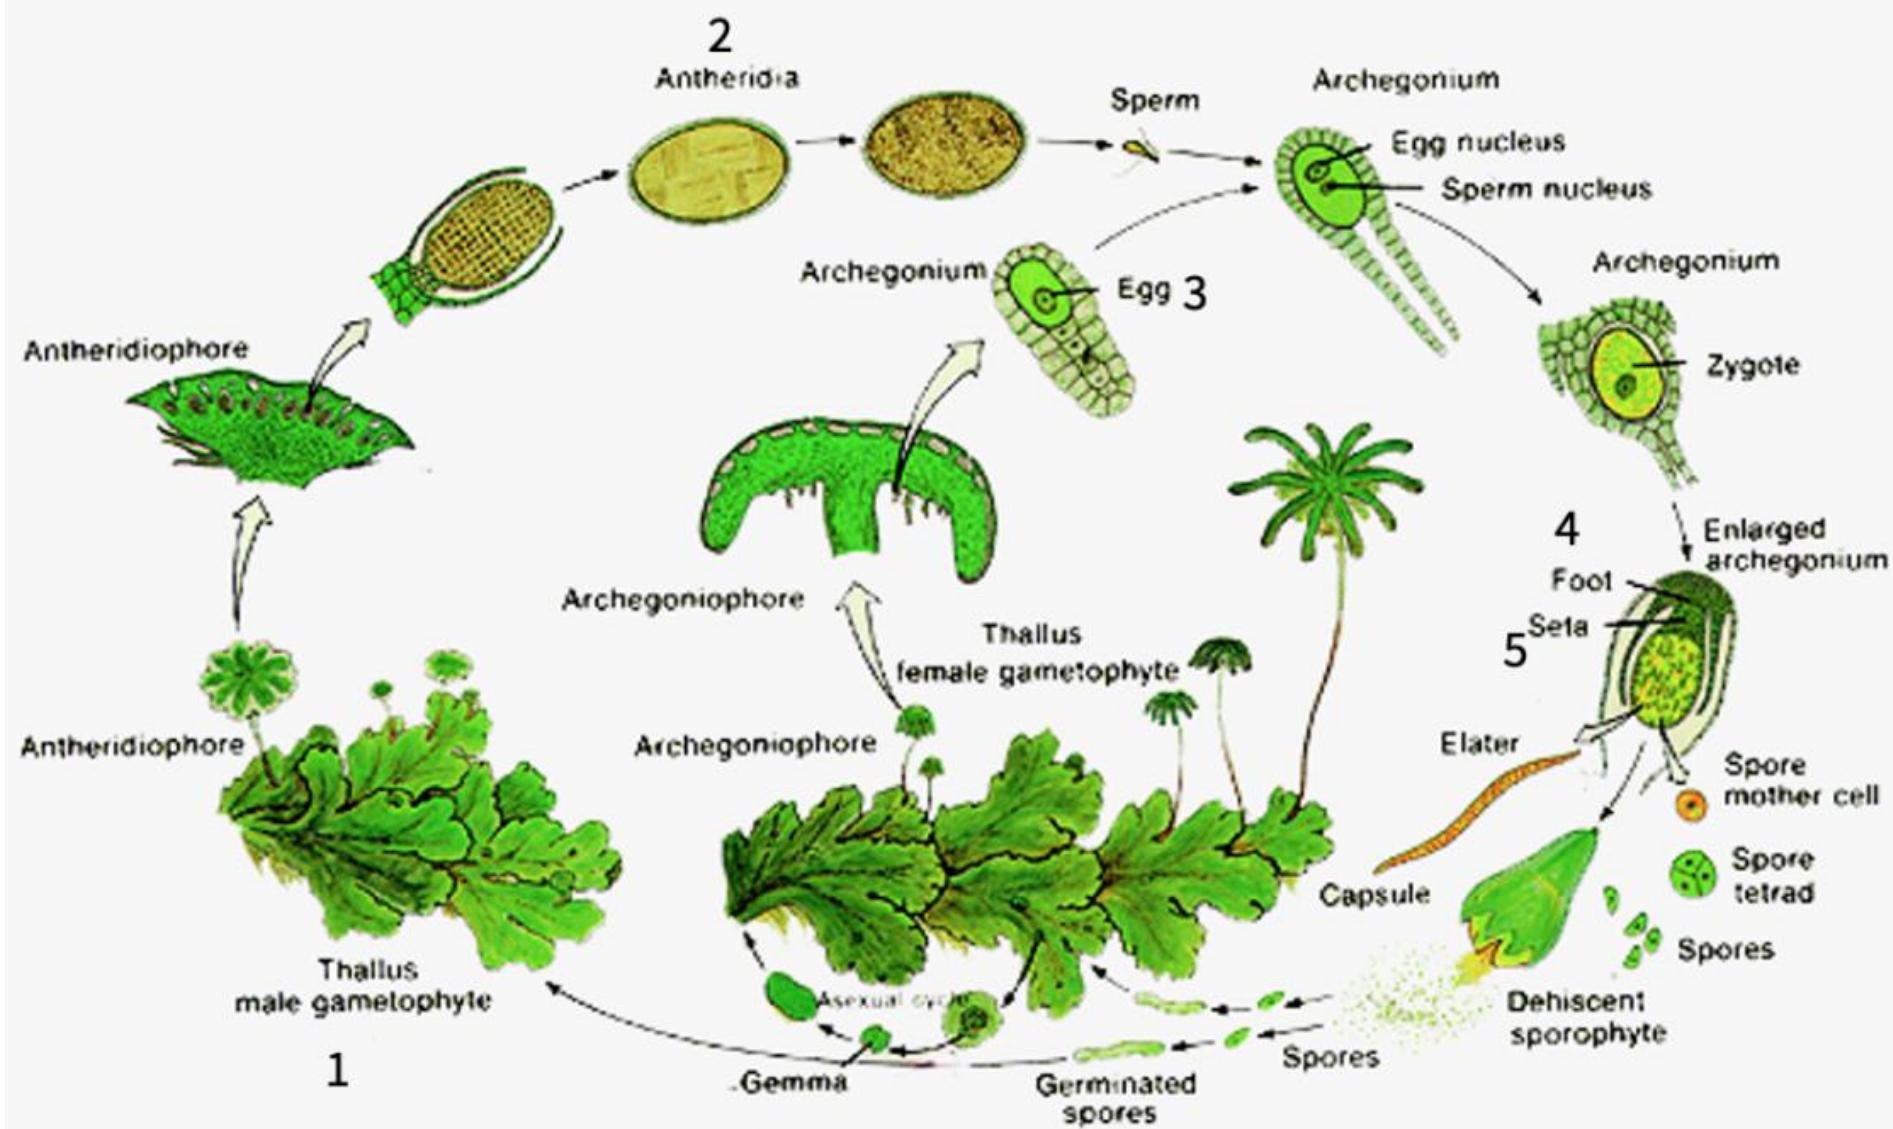

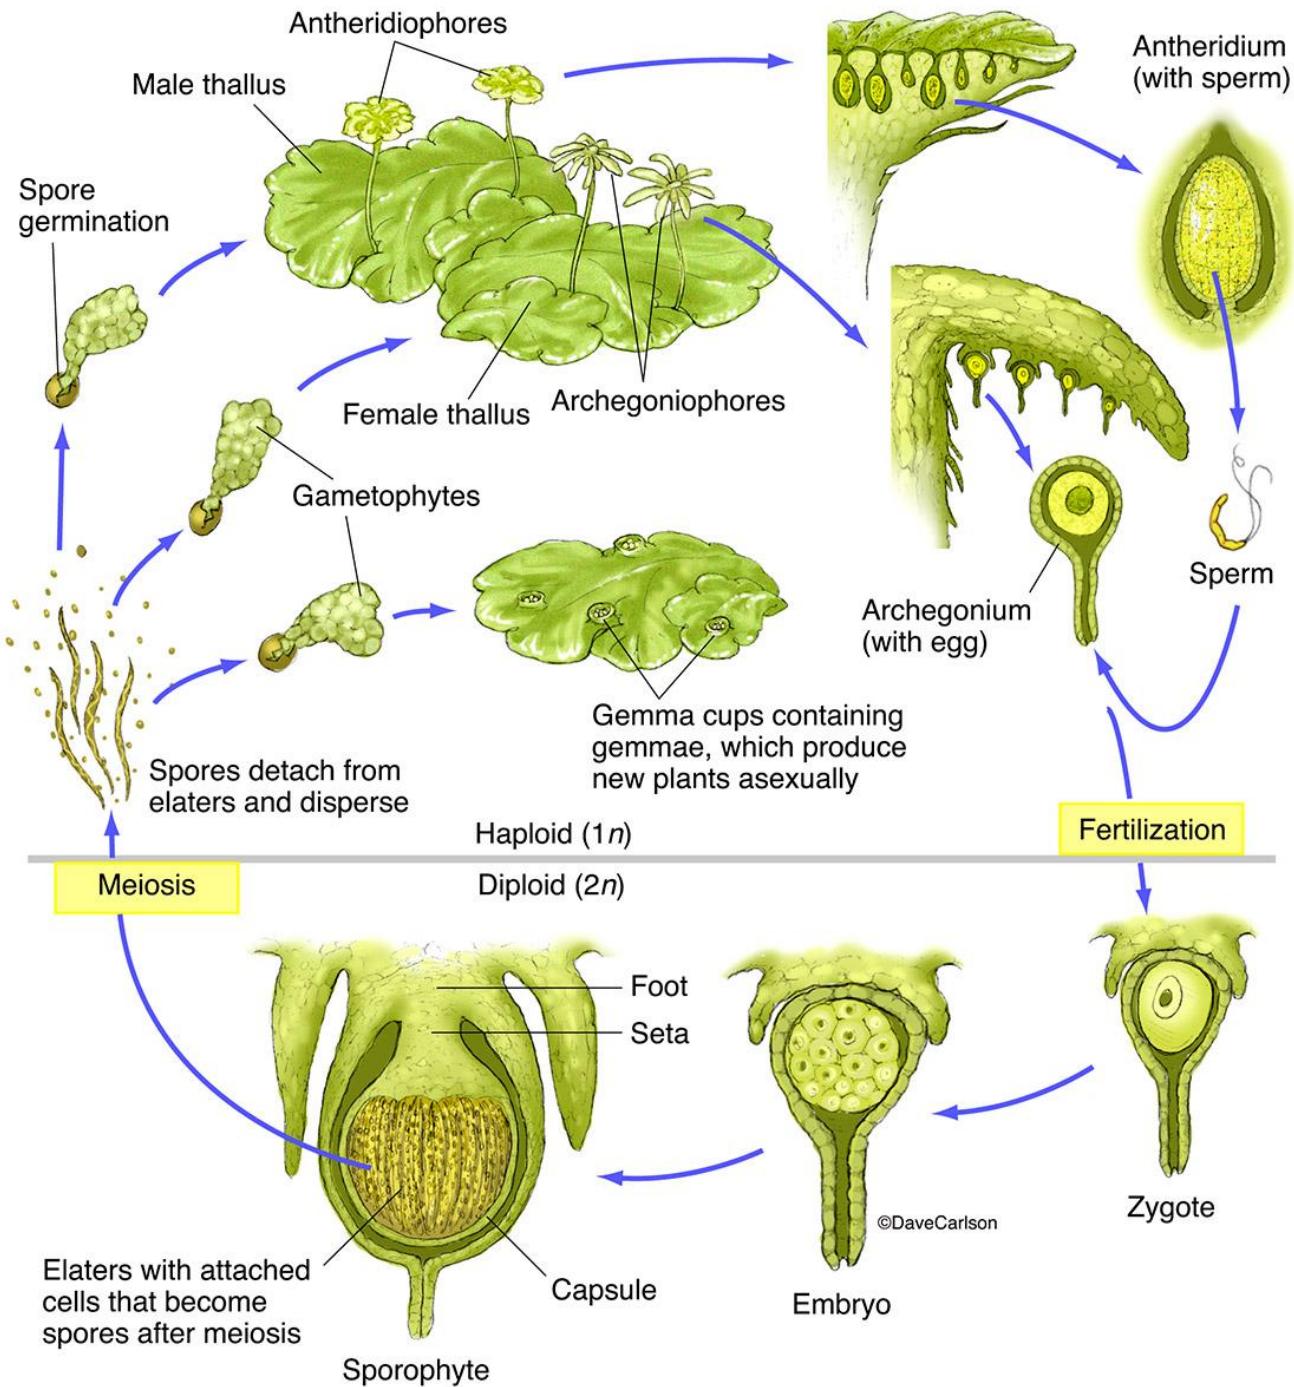

Transverse sections through male gametangiophore of *Marchantia* with antheridia

Marchantia Life Cycle

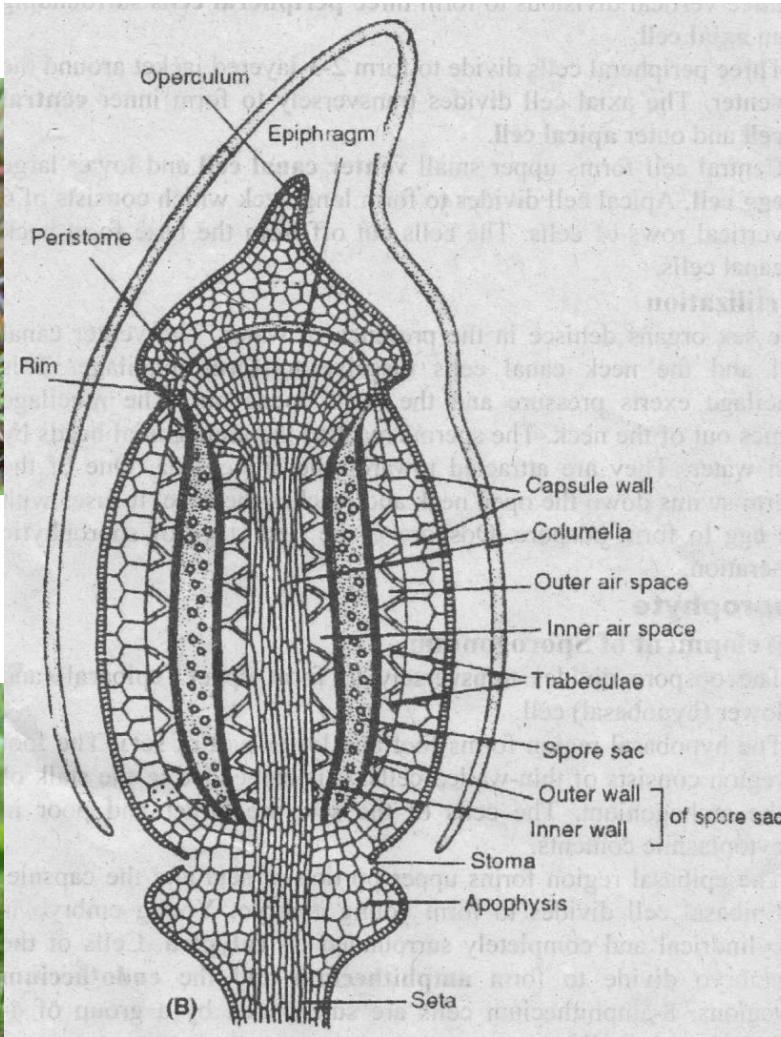

Classis True mosses - *Bryopsida*

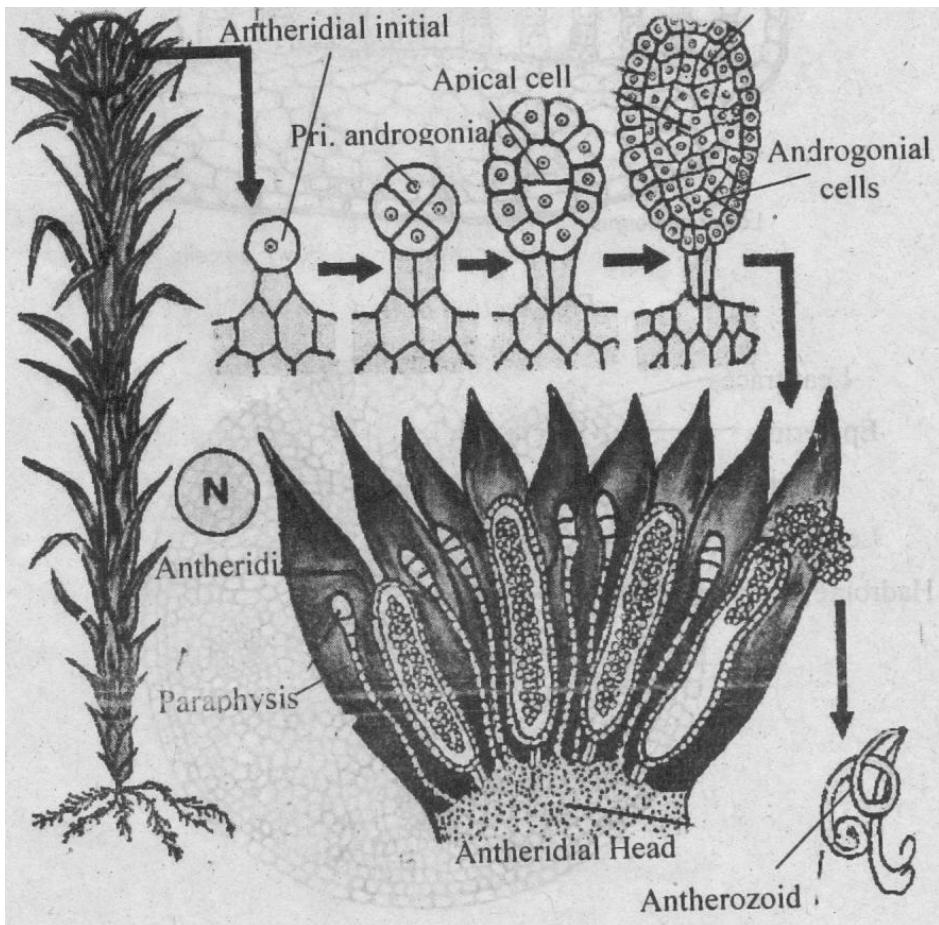

Subclass *Bryidae*

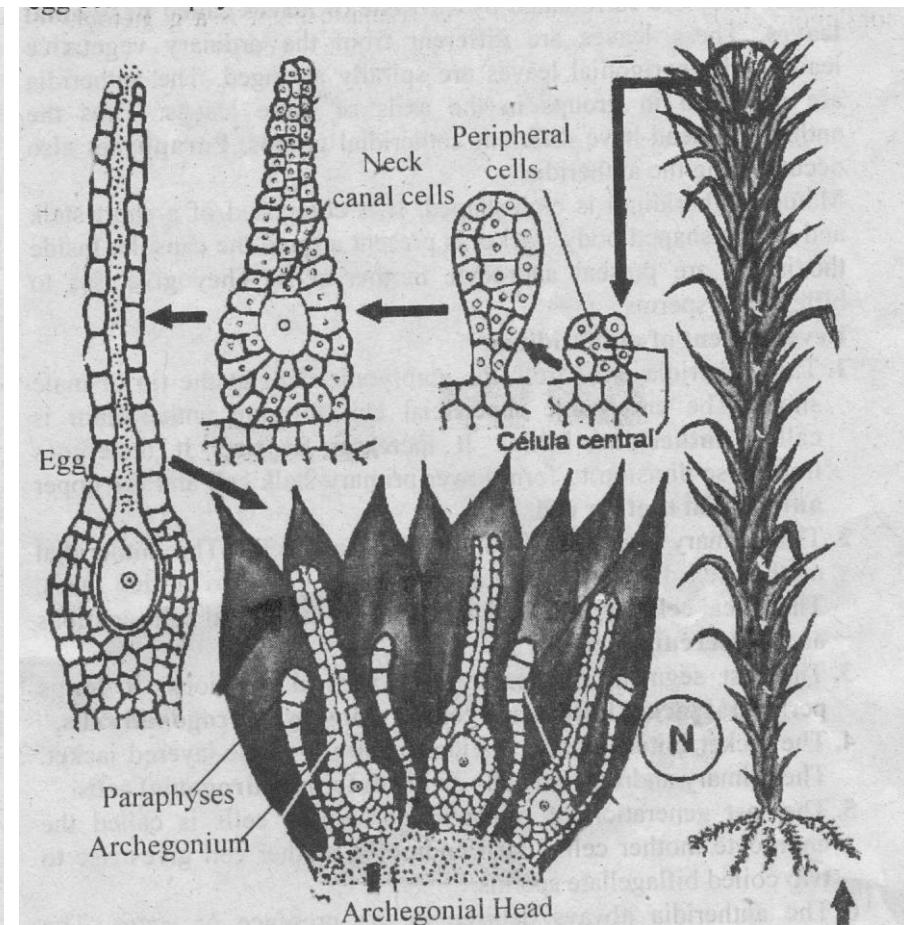

Polytrichum communis

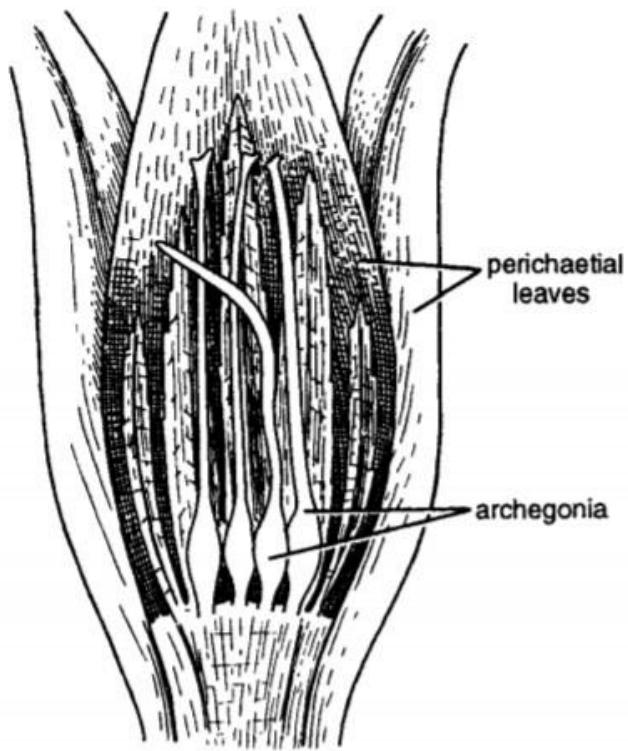

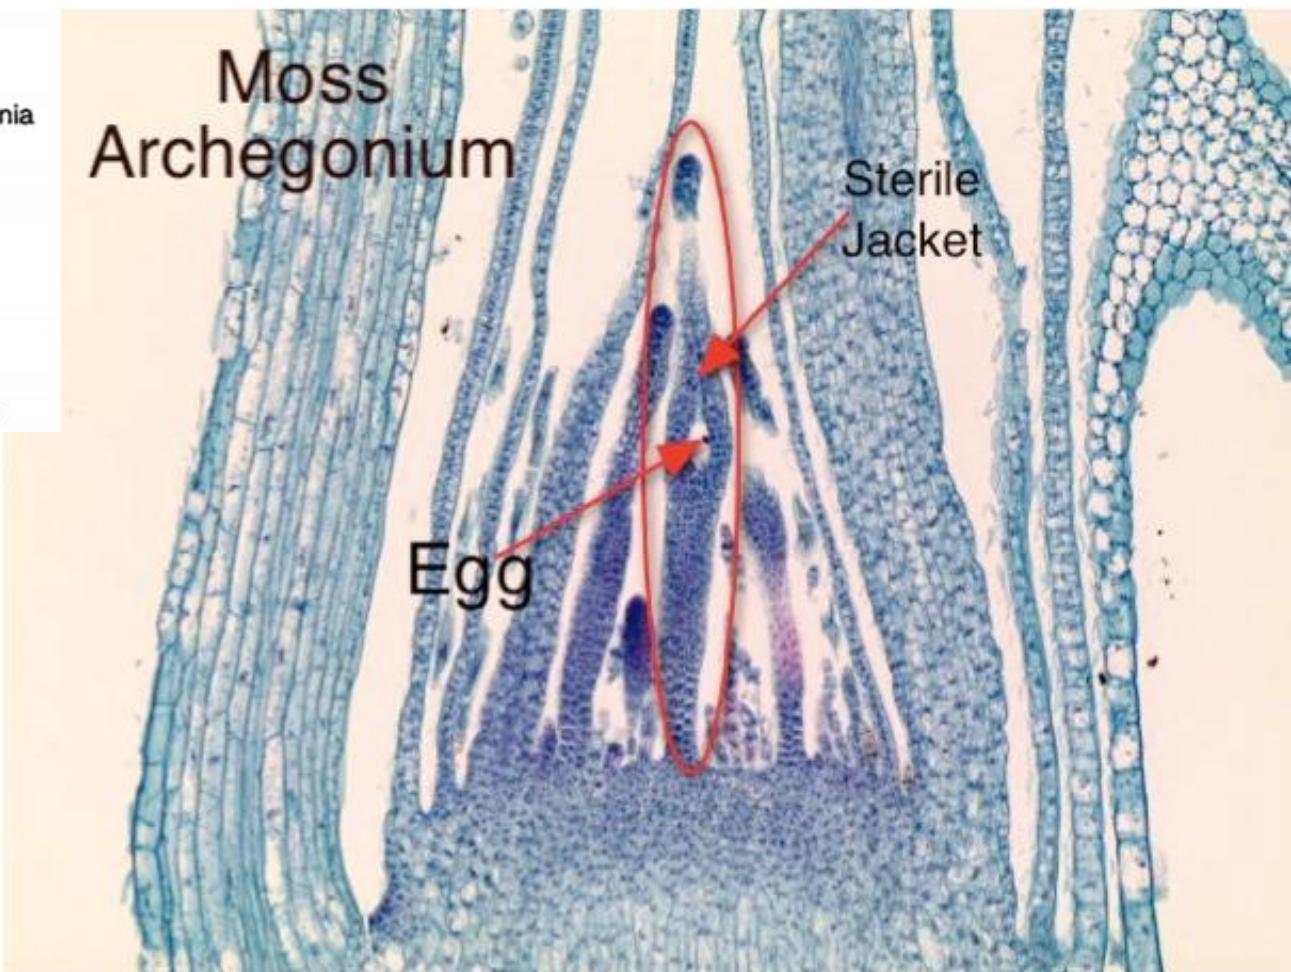

Male reproductive organs

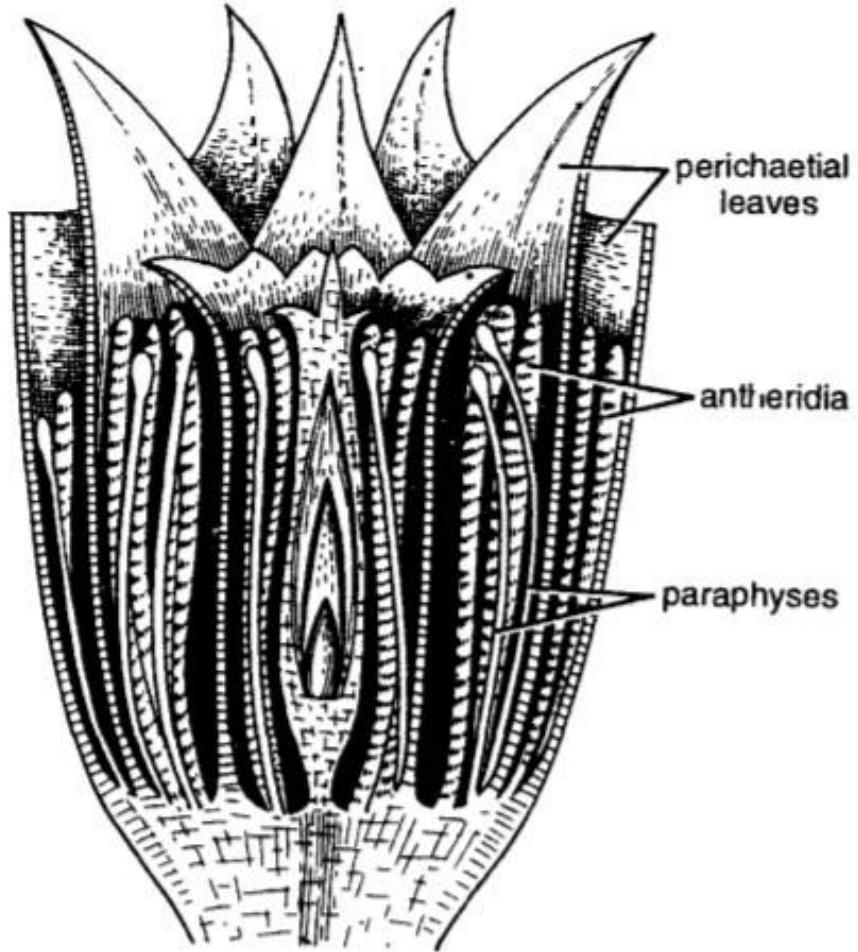

Female reproductive organs

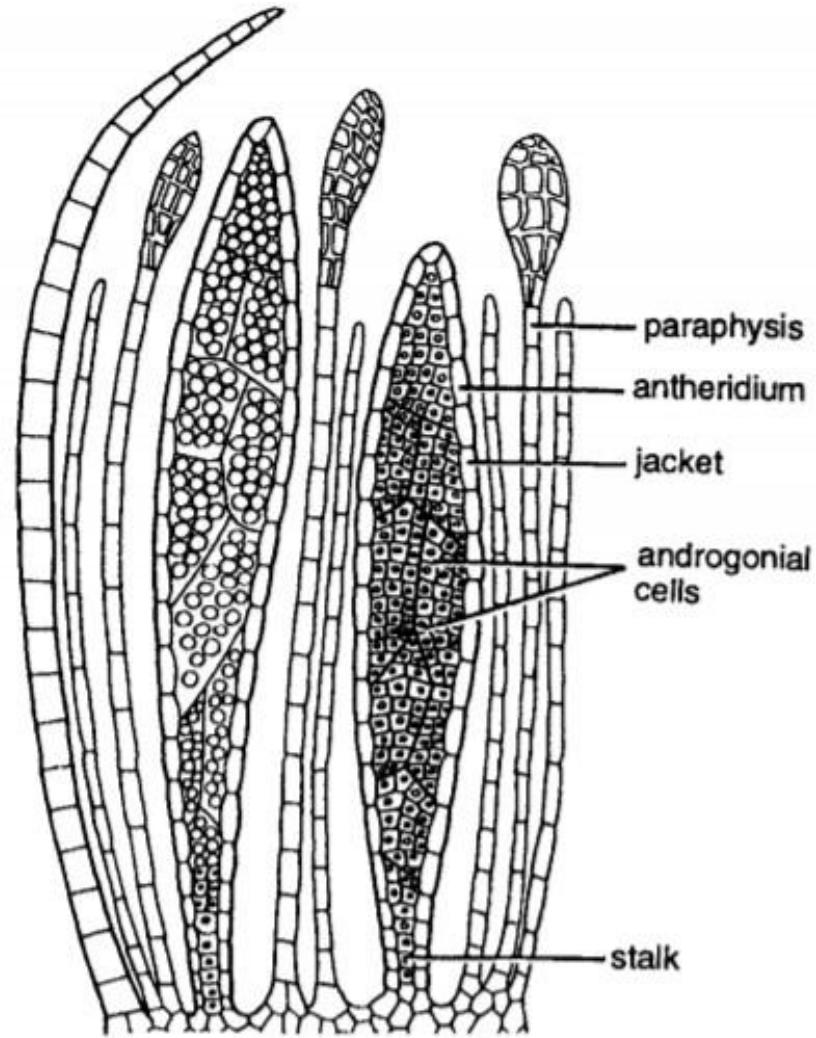

Polytrichum. L.s. through arachnoidal head.

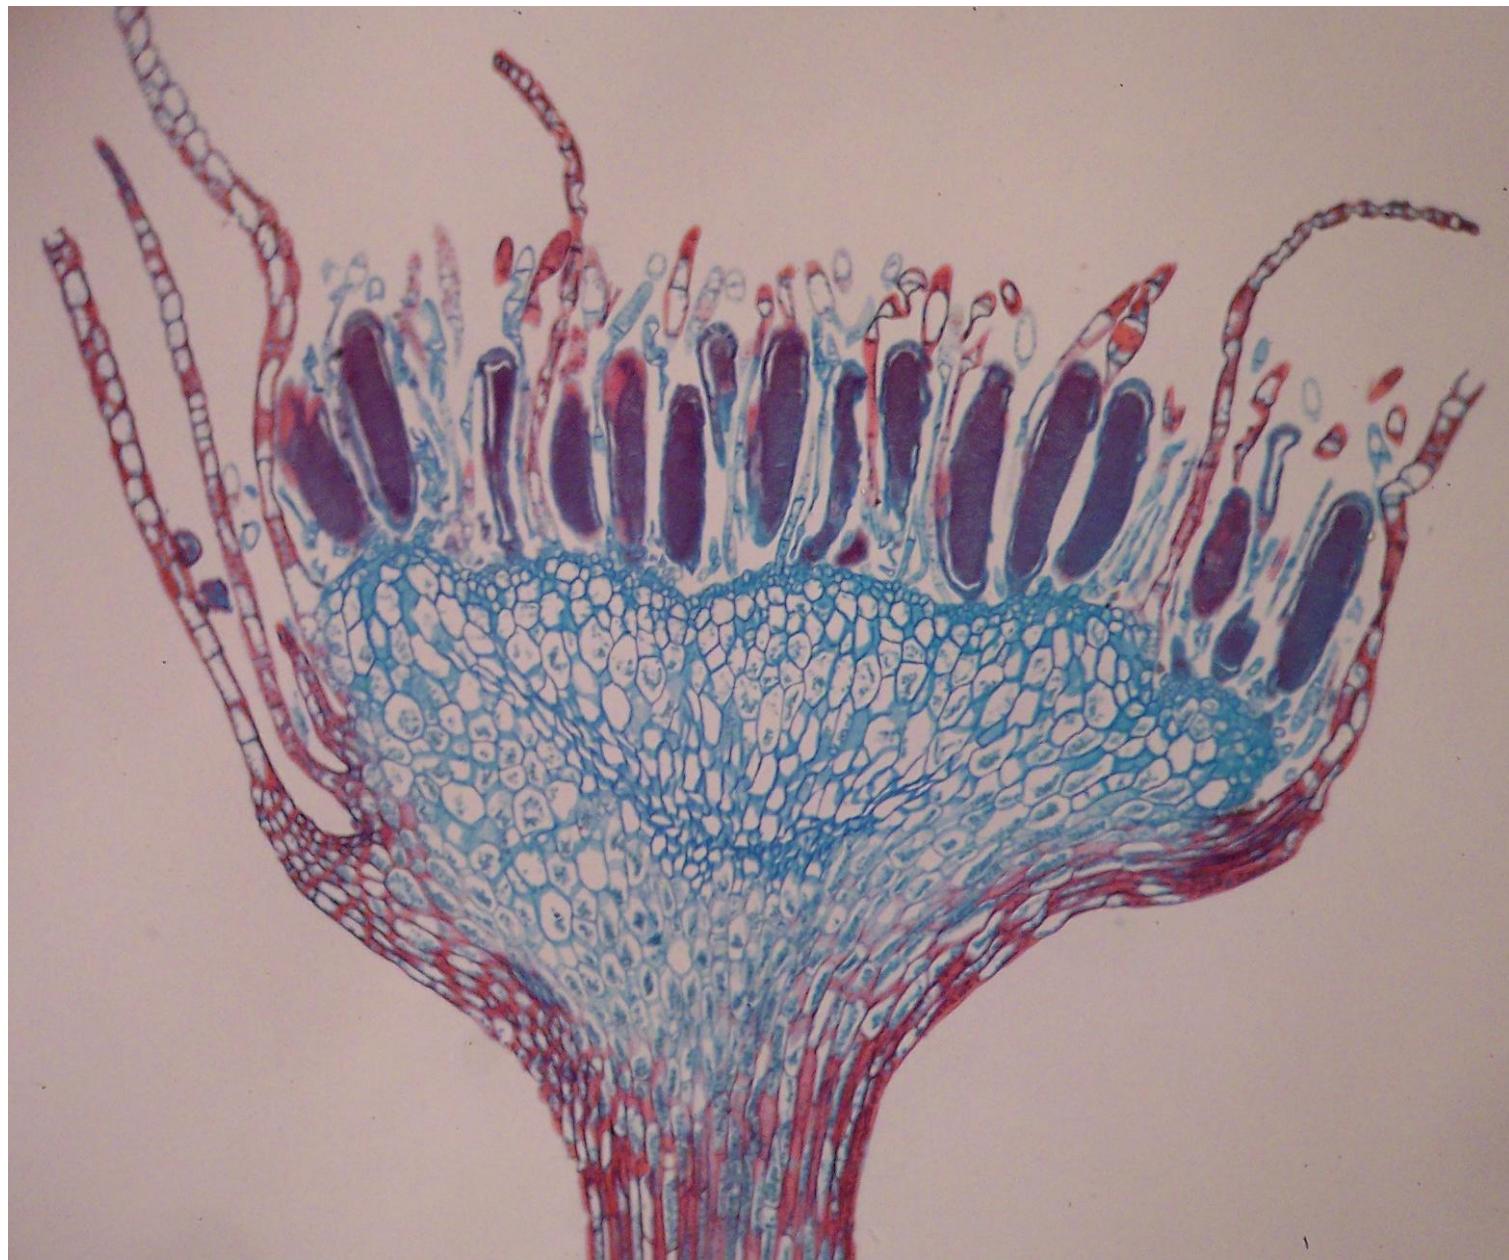

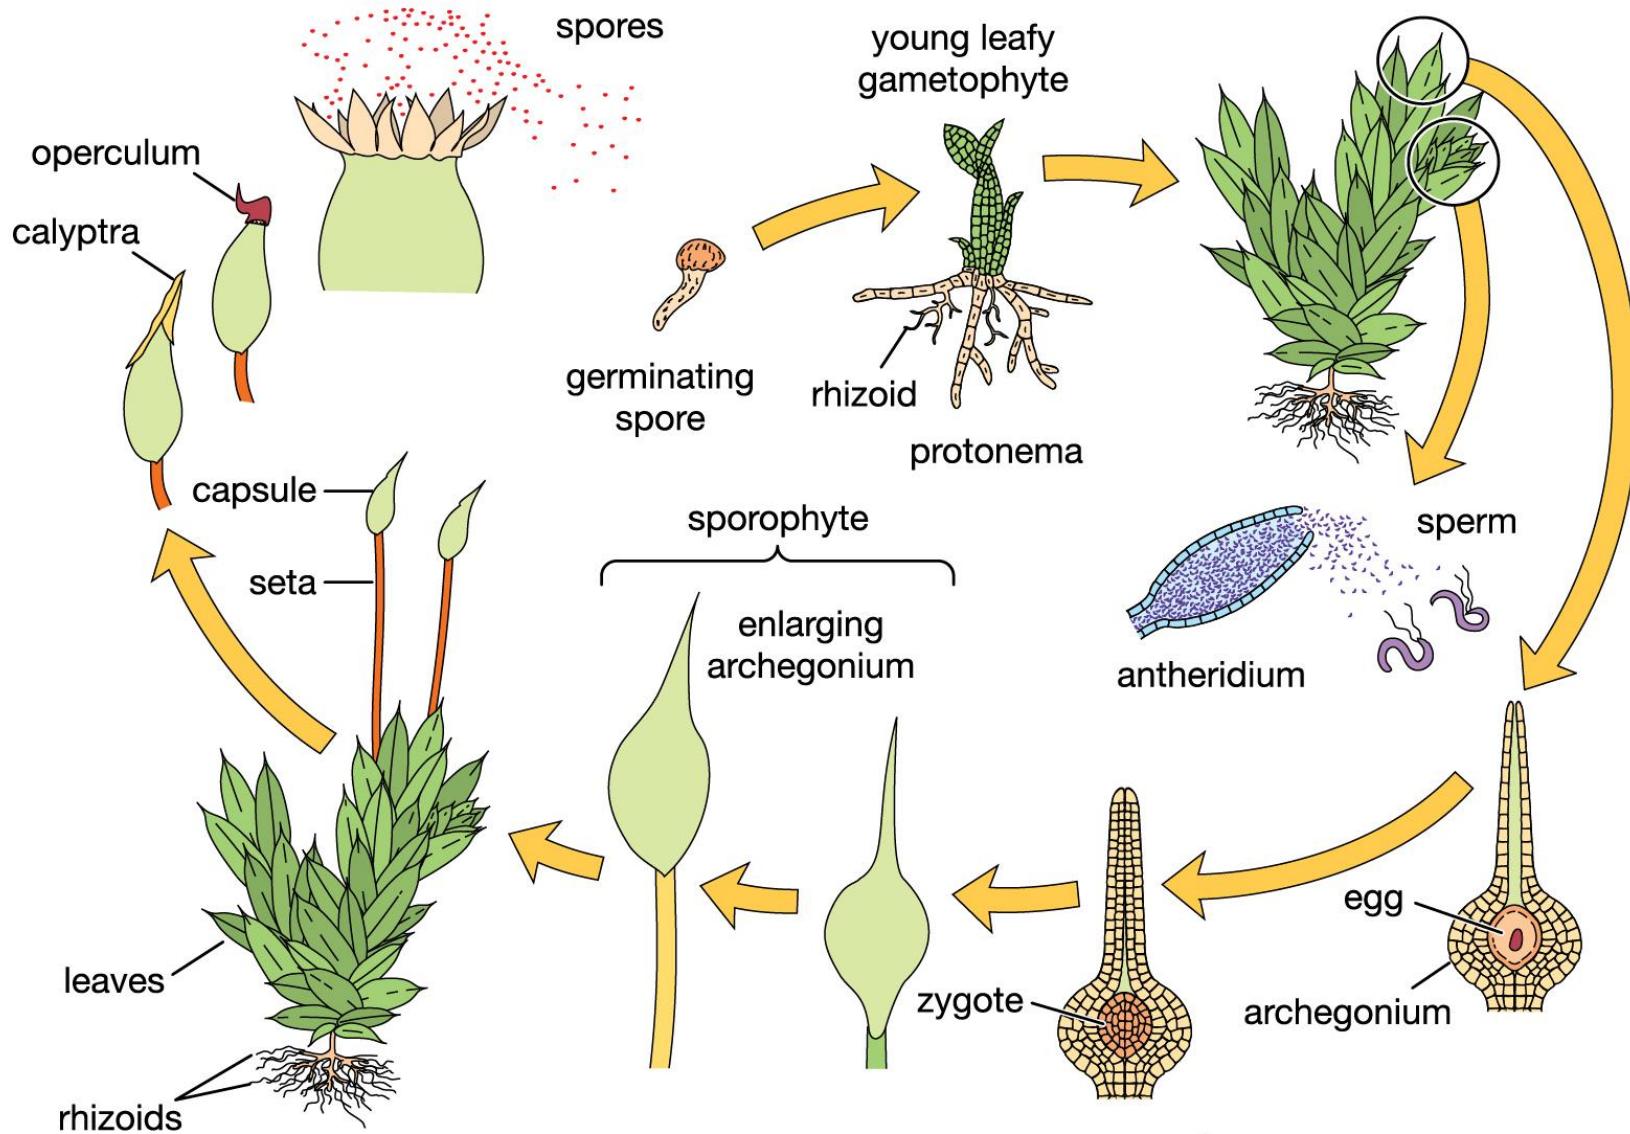

Polytrichum. L.s. through antheridial head.

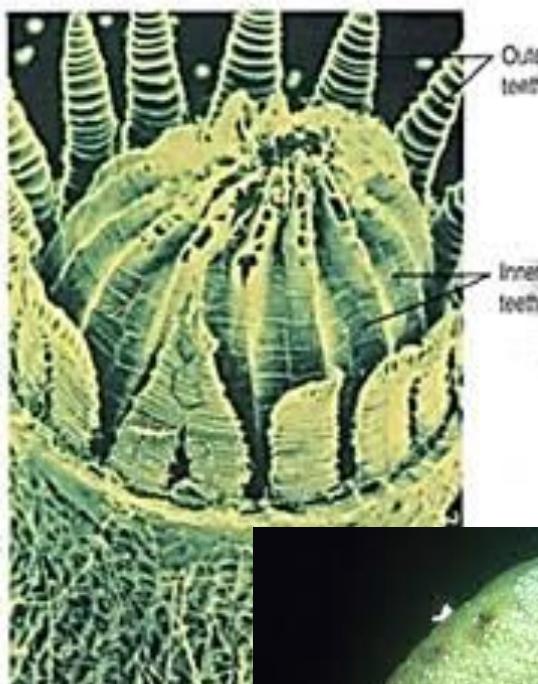

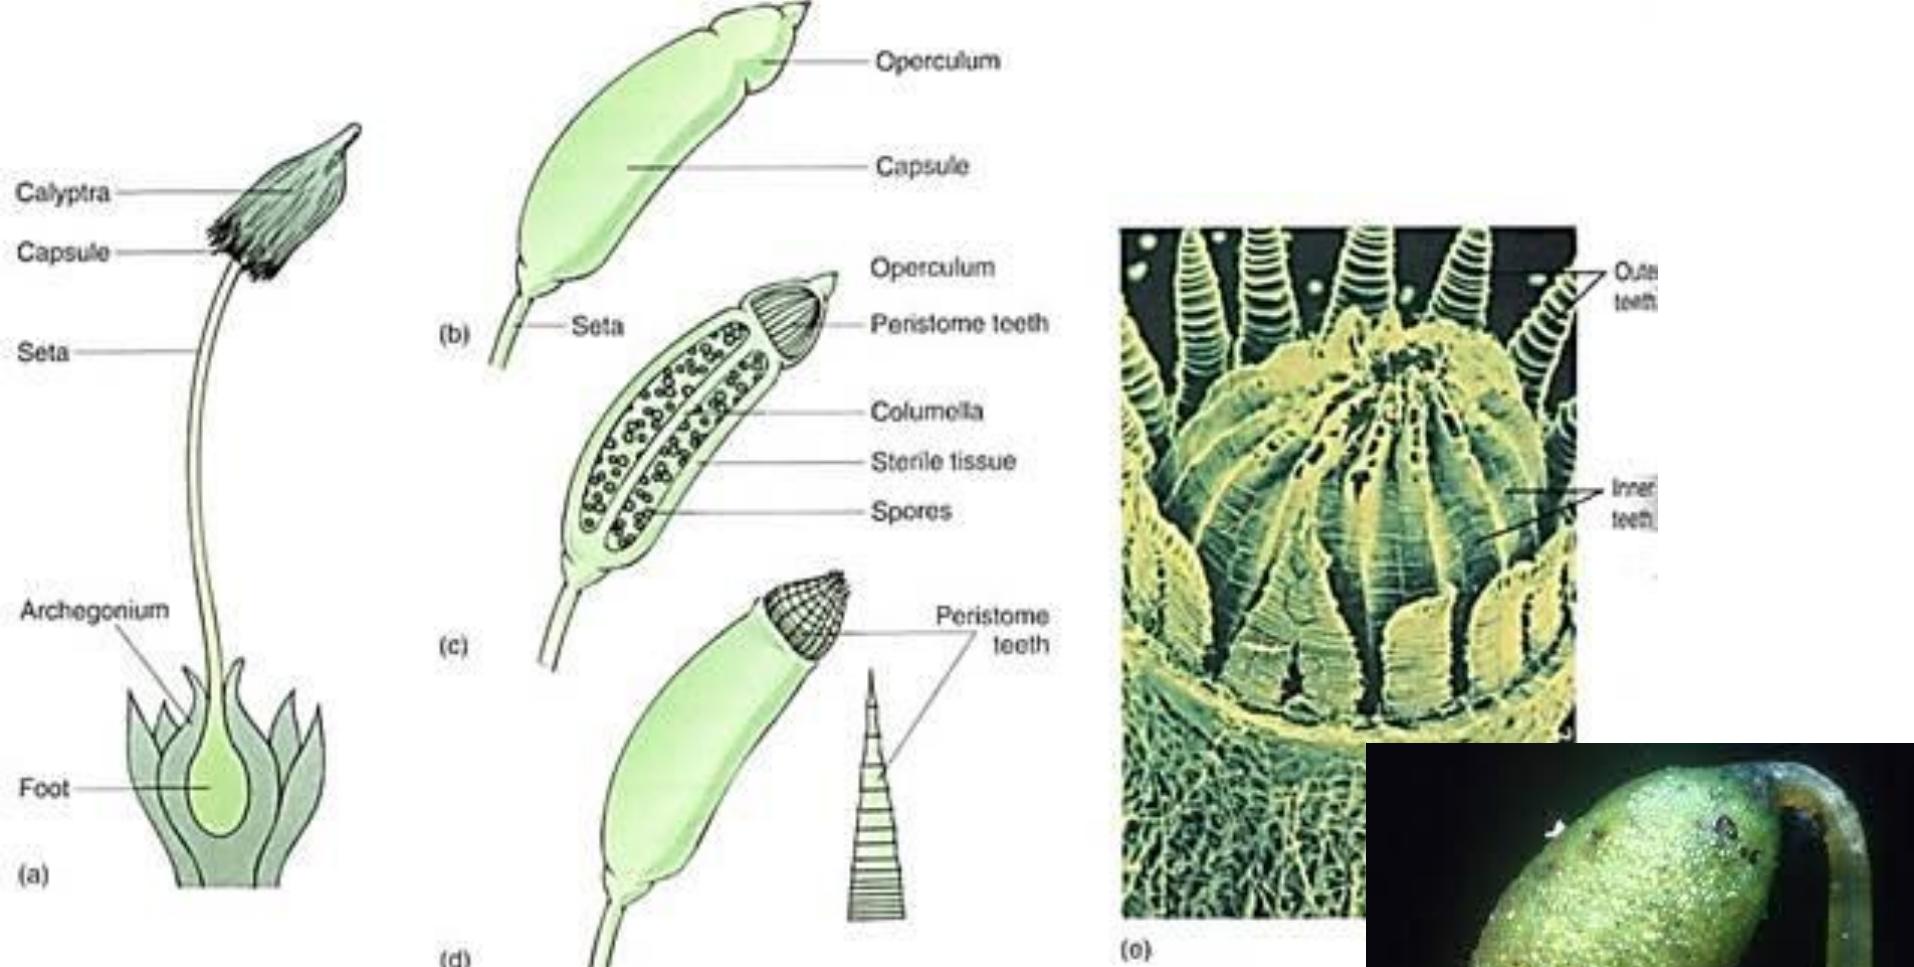

Polytrichum. Antheridia and paraphyses.
